

Cableway
Development
Company

A new way to experience the view

A project focused on sustainable access, leadership in exclusivity and premium transportation, with low impact and environmental preservation.

Red Sea Global

Why CDC

One of Europe's fastest-growing companies and the innovation leader

CDC delivers **turnkey ropeway installation** for passenger and material cableway systems in complex and high-altitude environments. Our teams manage full system realization, from structural assembly to commissioning, ensuring precise execution, regulatory compliance, and safe deployment in demanding terrain.

+500%
growth
in 3 years

Italian Innovation Leader

In December 2025, **CDC** recognized as the **fastest growing company in Italy** (Leader della Crescita 2026 ranking by Il Sole 24 Ore & Statista).

Integrated Approach

CDC acts as a **Turnkey Provider**, a single responsible partner from deep research to long-term operation.

European Growth Leader

In March 2026, **CDC** ranked among the **Top 3 fast-growing companies** in Europe by Financial Times & Statista.

Extreme Experience

CDC team has delivered **projects at altitudes above 4,000 meters** in the world's most challenging terrains.

Our Mission & Market

CDC delivers infrastructure access in the world's most challenging environments — mountains, deserts, islands, offshore — where conventional transport is too slow, too costly, or physically impossible.

Our mission:

“Make every destination reachable without compromising the environment or the quality of experience.”

The global market for ropeway mobility is estimated at **\$150B+** with 800M+ people in remote, mountainous and island regions underserved by conventional infrastructure.

AirBridge®

Patented self-propelled ropeway technology

AirBridge® is CDC's flagship ropeway technology, designed for challenging environments where traditional transport infrastructure is not feasible.

Protected by **52 patented innovations** (international patent WO2017064014), AirBridge® features a unique self-propelled mechanism with no equivalent in the global market.

PROPOSAL ADVANTAGES

System length: **No fixed limit**

Maximum ascent angle: **Up to 60°**

Payload capacity: **Up to 40 tons**

Span between supports: **Up to 3 km**

Operating speed: **Up to 8 m/s**

Unmatched Operational Efficiency

Up to 100% Capacity Utilization: while traditional ropeways typically operate below 10% average utilization, AirBridge® optimizes energy use by deploying self-propelled modular capacity strictly on demand.

Dramatically Lower CAPEX & OPEX: by eliminating centralized drive stations, fixed winches, and massive civil engineering, initial capital expenditures are minimized. Efficient, autonomous modules ensure significantly reduced lifecycle and operational expenses.

Accelerated ROI: designed for bankable project initiatives, this streamlined infrastructure drastically improves financial viability and guarantees a faster payback period.

Accelerated ROI

Enhanced financial viability and faster payback

Up to 70% Lower OPEX

Efficient performance with reduced lifecycle expenses

Up to 3× Lower CAPEX

Minimized structural and civil engineering costs

Project Portfolio

With over 20 years of experience and excellence, CDC continues to execute **mega-projects** across the globe. CDC has delivered projects across 4 continents – ski resorts, eco-lodges, pilgrim routes, offshore platforms, and mountain megaprojects. Each project delivered turnkey: engineering through long-term operation.

The Kingdom is our focus growth market, with active projects at NEOM, Al-Madinah and a growing pipeline across the PIF ecosystem. CDC stands alone as the only provider combining proven execution capabilities in Saudi Arabia with technology specifically suited to the Kingdom's most ambitious destinations.

20+ years of team expertise
200+ projects
\$50M+ revenue in 2025

PROPOSAL ADVANTAGES

KSA Execution Credentials

CDC is the **first and only international ropeway contractor to execute in Saudi Arabia's** giga-projects. Our team has operated in NEOM's Trojena mountain sector — one of the most logistically complex construction environments in the world.

We have demonstrated the ability to deliver on schedule **in desert and mountain terrain**, earn regulatory approval, and build long-term concession partnerships with Saudi government entities. No other ropeway company has **proven KSA execution** at this level.

Key Advantages

- First & only ropeway contractor at NEOM / Trojena mountain sector
- Delivered on schedule: 5 major transport roads + high-altitude logistics
- Recognised for environmental stewardship in sensitive desert/mountain terrain
- Passenger and heavy material Ropeway contractor at AIUla / Project W

Applications in Saudi Arabia

Desert Rock

- Preservation of the exclusive character of Desert Rock
- Direct access to villas and elevated viewpoints
- Elimination of switchback roads and large earthworks
- Premium mobility aligned with the ultra-luxury standard
- Efficient operation for guests, staff and services

PROPOSAL ADVANTAGES

AMAALA Triple Bay

- Natural connection between sea, valleys and mountains
- Premium arrival experience
- Reduced environmental and visual impact
- Ideal for large spans and complex topography
- Silent mobility aligned with the wellness concept
- VIP cabins as part of the AMAALA experience

Lagoon Crossings

- Complete protection of the coral reef
- Superior alternative to bridges and causeways
- Clean mobility between islands
- Nearly invisible visual footprint
- Exclusive panoramic experience
- Selective connectivity without urbanizing the archipelago

PROPOSAL ADVANTAGES

Southern Dunes

- Transforming commutes into experiences
- Creates an iconic differentiator for the resort
- Highlights scenic desert views
- Reduces internal vehicle traffic in prime areas
- Supports events, hospitality, and VIP experiences
- Reinforces sustainability and minimal land impact

In Magna, the transformation of mobility into a luxury experience connects the coast, mountains, hotels, villas, and attractions with minimal impact on the land, high comfort, and an exclusive aerial journey over the Gulf of Aqaba.

Full support for the structure

- 12 destinations
- 15 luxury hotels
- 1,600 rooms/suites/apartments
- more than 2,500 premium residences

- Connection between coast, mountains and valleys
- Internal mobility without excessive vehicles
- Tourist experience as a commercial differentiator
- Access to difficult areas without altering the environment
- Separation between guests, operations and services

Industrial & Logistics Applications

Key Applications

- **Offshore Platforms & Marine:** connecting offshore structures, port facilities, and coastal resorts where boat or helicopter access is impractical or costly. Direct reference: Caspian Sea industrial platform.
- **Mining & Heavy Industry:** transporting ore, equipment and personnel across terrain impassable by road, with 20-tonne payload capacity.
- **Power Line & Infrastructure Maintenance:** aerial access to remote pylons, towers, and maintenance corridors without roads or heavy machinery.
- **Construction Logistics:** delivering heavy materials to high-altitude or island build sites — used across NEOM and Soudah Peaks construction phases.

Completed projects and upcoming opportunities in KSA

CDC currently has 4 successfully completed, 1 ongoing and a few pipeline projects across Saudi Arabia, all within the PIF ecosystem:

AIUla, NEOM Trojena, NEOM Magna, Soudah Peaks, Red Sea Global, and THE RIG — a mix of completed projects and active pipeline, all with PIF / PIF-adjacent ownership structures.

These represent **permanent infrastructure** assets with long-term concession economics and direct Vision 2030 alignment.

PROPOSAL ADVANTAGES

CDC is uniquely positioned as the only provider with proven KSA execution and a portfolio spanning religious tourism, mountain resorts, luxury destinations and offshore applications.

Environmental responsibility

Environmental compliance

Full adherence to local and international environmental regulations throughout the project

Impact minimization

Construction methods selected to reduce disturbance to natural habitats and ecosystems

Controlled logistics

Material transport and waste management planned to limit environmental exposure

Ecological Intelligence

The system is designed to operate in harmony with the surrounding ecosystem, ensuring that every aspect of its operation actively contributes to **environmental preservation**.

Beyond minimizing physical impact, it integrates **advanced technologies** that reduce noise, optimize energy use, and eliminate waste, creating a seamless balance between infrastructure and nature.

Quality

CDC embeds quality management throughout every project phase, not as a final check, but as a controlled execution standard.

Our procedures are designed to catch non-conformities early, when they are inexpensive to resolve.

QC procedures

Defined and applied at each phase of the project lifecycle.

Compliance verification

Cross-checked against project specifications and applicable standards.

Full documentation

Complete audit trail from investigation through to commissioning.

PROPOSAL ADVANTAGES

Safety

Safety is not a project phase, it is a continuous discipline.

CDC's HSE management framework is active from the first site visit to final handover, with risk controls adapted to the specific hazards of each ropeway project.

Proactive risk management

Formal risk assessments are conducted before each project phase. Hazards are identified, evaluated, and mitigated before work begins.

Safe execution planning

Method statements, toolbox talks, and site safety plans are developed in coordination with all contractors. CDC ensures that safe working practices are embedded in every team on site.

Let's design the future together

Our team is ready to assess your terrain, define the right ropeway configuration and provide a preliminary cost model, at no obligation.
