

Cableway
Development
Company

A new way to **experience** **the view**

A project focused on sustainable access, leadership in exclusivity and premium transportation, with low impact and environmental preservation.

Discovery
LAND COMPANY

A delicate balance: **privilege vs. preservation**

Discovery Land Company designs exclusive residential communities with exceptional lifestyles.

Operating in different parts of the world, it seeks to bring comfort, exclusivity, preservation, and refinement to life in extraordinary landscapes.

At the same time, this context presents a strategic opportunity to implement a **new high-value**, low-impact model that improves accessibility without compromising environmental integrity.

The proposed solution consists of a **modern cable car system** that transforms the travel experience into a world-class sustainable option, preserving the tranquility and biodiversity of the ecosystem.

Access barriers and distance

The main advantage is that the journey is fast, quiet, and comfortable, offering residents and visitors a **unique experience**. Instead of relying exclusively on cars, buggies, or internal roads, the cable car allows for direct transport with **panoramic views** and less environmental impact.

In areas with rugged terrain, mountains, valleys, or large green spaces, the cable car reduces the need for terrain cuts, paving, retaining walls, and extensive roads. This helps preserve the natural landscape and the **visual exclusivity** of the development.

From one place to any other

- Residences
- Clubhouse
- Golf course
- Recreational areas
- Spa
- Private parking
- Ski area
- Viewpoints and panoramic areas

Luxury is also about mobility

Luxury properties need to offer comfortable, safe, and memorable commutes.

In high-end properties, luxury isn't just in the architecture, but also in how people move around.

Long distances, sloping terrain, or exclusive access can be transformed into **comfortable**, safe, and memorable experiences.

The cable car **reduces long walks and facilitates connections** between villas, common areas, viewpoints, the beach, marina, spa, and restaurants.

Each journey ceases to be merely a necessity and becomes part of the premium experience of the development.

Mobility integrates with luxury architecture, enhancing the property's value and **elevating the quality of life** for its users.

Quality of life and the value experience

A cable car **elevates quality of life** by transforming daily travel into a pleasant leisure experience. It reduces physical effort and **offers greater comfort for families, elderly residents, and visitors.**

Panoramic views create an emotional connection with the property and its surrounding landscape. By reducing dependence on internal vehicles, it promotes a quieter, safer, and more exclusive environment.

Its **silent operation, privacy, and harmony** with nature make mobility an essential part of the luxury experience.

4 seasons

In any region, especially in areas with snow, steep slopes, and isolated luxury homes, premium transportation can make a huge difference by solving a real problem: safe, comfortable, and predictable access year-round.

A sophisticated residence cannot rely solely on a road vulnerable to the weather. A cable car **transforms access into a safe, elegant, and functional** experience throughout all four seasons.

Key Advantages

- Reduced ground movement, erosion, artificial drainage, vehicle traffic, noise, and local emissions
- Improved **privacy**, access control, and reduced circulation near properties
- Combination of mobility, **security**, sustainability, exclusivity, and increased property value
- Enjoy nature without noise, dust, traffic, and with **controlled** visual impact

Many reasons

Key Advantages

- **Property value enhancement:** the installation of cable cars adds exclusivity, innovation, and differentiation to the property, increasing its perceived value in the luxury market.
- **Premium experience for residents and visitors:** travel ceases to be merely functional and becomes a comfortable, panoramic, and memorable experience.
- **Smart solution for extensive or sloping terrain:** the cable car reduces long walks, facilitates access between areas of the property, and improves mobility in difficult-to-access locations.
- **Less environmental and visual impact:** compared to new internal roads, the cable car better preserves the natural landscape, reduces interventions on the terrain, and reinforces the concept of sustainable luxury.
- **Multifunctional use throughout the year:** it can serve residential travel, access to leisure areas, beach, marina, spa, restaurant, viewpoints, ski areas, or internal services, making the property more efficient and attractive.

Why CDC

One of Europe's fastest-growing companies and an innovation leader

CDC delivers **turnkey ropeway installation** for passenger and material cableway systems in complex and high-altitude environments. Our teams manage full system realization, from structural assembly to commissioning, ensuring precise execution, regulatory compliance, and safe deployment in demanding terrain.

+500% growth in 3 years

European Growth Leader

In March 2026, **CDC** ranked among the **Top 3 fast-growing companies** in Europe by Financial Times & Statista.

Italian Innovation Leader

In December 2025, **CDC** recognized as the **fastest growing company in Italy** (Leader della Crescita 2026 ranking by Il Sole 24 Ore & Statista).

Integrated Approach

CDC acts as a **Turnkey Provider**, a single responsible partner from deep research to long-term operation.

Extreme Experience

CDC team has delivered **projects at altitudes above 4,000 meters** in the world's most challenging terrains.

AirBridge®

Patented self-propelled ropeway technology

AirBridge® is CDC's flagship ropeway technology, designed for challenging environments where traditional transport infrastructure is not feasible.

Protected by **52 patented innovations** (international patent WO2017064014), AirBridge® features a unique self-propelled mechanism with no equivalent in the global market.

System length: **No fixed limit**

Maximum ascent angle: **Up to 60°**

Payload capacity: **Up to 40 tons**

Span between supports: **Up to 3 km**

Operating speed: **Up to 8 m/s**

Slow luxury concept

We elevate the experience into the air, creating a **premium alternative to transport**. This is not a transport system - it is a mobile observation platform.

SYSTEM SPECIFICATIONS:

Glass floor: transparent floor covering 50–70% of the cabin area for safe observation.

Meditative pace: speed reduced to 2–4 m/s. Journey time: 25–35 minutes for calm panoramic contemplation.

Comfort & capability: spacious cabins for 10–12 guests with extended dispatch intervals (40–60 sec).

Premium in-flight service: ecology audio guide, champagne, tea/coffee and fresh local fruits during the flight.

Cabin Boarding – at any point

AirBridge® also allows cabins or carriers to stop and be lowered at any point along the line, enabling **passengers to board and disembark** exactly where needed. This creates a **highly flexible system**, independent from fixed stations.

Flexible Landing

Built-in independent crane allows cabins to stop and land at any point along the route.

Exclusive Locations

It allows access to remote viewpoints without building permanent observation decks.

Safety

Cabins with Faraday cages provide protection from lightning strikes, even in adverse weather conditions.

The Chameleon Concept

Design that works with nature, not against it

The project aims to **enhance the cultural heritage** through the architectural design of the stations. Developed in collaboration with local architects, they will incorporate traditional materials and national elements, **creating a dialogue between Italian design excellence and local identity.**

Supercar design: cabin design developed by **ItalDesign (Bugatti).**

Disappearing beauty: The “Chameleon” coating allows the cabins to blend in visually with their surroundings.

Architectural integration: stations designed by local architects, incorporating traditional cultural elements.

100% Zero-Emission Autonomy – Powered by Ammonia

AirBridge® has partnered with Swiss CleanTech innovator Neology to integrate breakthrough ammonia-to-power technology directly into our self-propelled modules. By replacing conventional diesel generators with zero-emission ammonia power cells, AirBridge® achieves complete off-grid autonomy without compromising the environment.

The B2B Value

- **Zero-Emission Operations:** generates clean electricity on demand using green ammonia, **producing absolutely zero CO₂ emissions** - ideal for ecologically sensitive areas, mountain resorts, and green urban mobility.
- **Maximum Off-Grid Independence:** ammonia offers **superior volumetric energy** density compared to hydrogen and batteries. This ensures extended, uninterrupted operation without the massive CAPEX required to build heavy electrical grids across complex terrain.
- **Safe & Scalable Logistics:** unlike raw hydrogen, ammonia is easily transported and stored at ambient conditions, leveraging existing global infrastructure for **safe and cost-effective** refueling in remote environments.
- **Future-Proof ESG Compliance:** **elevates your project's** environmental profile, securing compliance with the strictest global sustainability standards and unlocking green financing opportunities.

AirBridge® modules offer **ultimate flexibility**, powered by electric, hybrid, or breakthrough **zero-emission ammonia generators** in partnership with Neology, ensuring total operational resilience off the grid.

Unmatched Operational Efficiency

Up to 100% Capacity Utilization: CDC optimizes each installation to achieve the required passenger capacity per hour, tailored to the operational requirements of the project.

Dramatically Lower CAPEX & OPEX: by eliminating centralized drive stations, fixed winches, and massive civil engineering, initial capital expenditures are minimized. Efficient, autonomous modules ensure significantly reduced lifecycle and operational expenses.

Accelerated ROI: designed for bankable project initiatives, this streamlined infrastructure drastically improves financial viability and guarantees a faster payback period.

Up to 3x Lower CAPEX

Minimized structural and civil engineering costs

Up to 70% Lower OPEX

Efficient performance with reduced lifecycle expenses

Accelerated ROI

Enhanced financial viability and faster payback

PROPOSAL ADVANTAGES

Environmental responsibility

Environmental compliance

Full adherence to local and international environmental regulations throughout the project

Impact minimization

Construction methods selected to reduce disturbance to natural habitats and ecosystems

Controlled logistics

Material transport and waste management planned to limit environmental exposure

Ecological Intelligence

The system is designed to operate in harmony with the surrounding ecosystem, ensuring that every aspect of its operation actively contributes to **environmental preservation**.

Beyond minimizing physical impact, it integrates **advanced technologies** that reduce noise, optimize energy use, and eliminate waste, creating a seamless balance between infrastructure and nature.

Quality

CDC embeds quality management throughout every project phase, not as a final check, but as a controlled execution standard.

Our procedures are designed to catch non-conformities early, when they are inexpensive to resolve.

QC procedures

Defined and applied at each phase of the project lifecycle.

Compliance verification

Cross-checked against project specifications and applicable standards.

Full documentation

Complete audit trail from investigation through to commissioning.

Safety

Safety is not a project phase, it is a continuous discipline.

CDC's HSE management framework is active from the first site visit to final handover, with risk controls adapted to the specific hazards of each ropeway project.

Proactive risk management

Formal risk assessments are conducted before each project phase. Hazards are identified, evaluated, and mitigated before work begins.

Safe execution planning

Method statements, toolbox talks, and site safety plans are developed in coordination with all contractors. CDC ensures that safe working practices are embedded in every team on site.

Let's design the future together

Our team is ready to assess your terrain, define the right ropeway configuration and provide a preliminary cost model, at no obligation.
